

Version **2**

# V2 Sentry

## Drone Detection System

Version 2's Sentry monitors drone communications. By analyzing these signals, it can uniquely identify drones and categorize unidentifiable signals into various threat levels for the vast majority of commercially available drones.

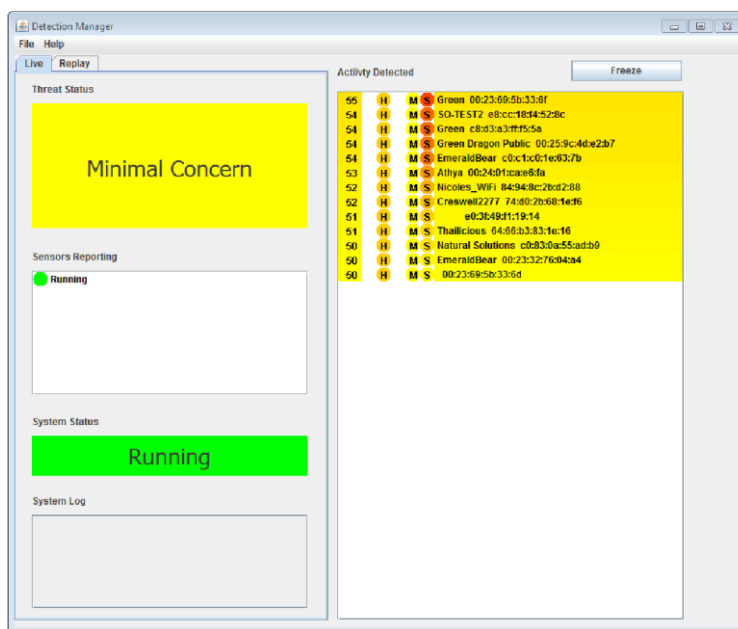

The Sentry software displays threats and issues instant audio and/or email alerts.

Typical detection is within 2 seconds at a range of up to 500m.

Designed with ease of use in mind, there is no on-site start-up time or the need for a continuous operator.

*V2 Sentry with Covert Antenna*

*Sentry Software*

### Features

**Built-in Self-Test** – Continuous system status monitoring and display

**Alerts** – Audio and/or email alerts issued upon threat detection

**Live View** – Monitor all electronic communication traffic in range

**Replay Mode** – Replay historic data for forensic analysis

**Alert Time** – 2 seconds typical (configuration dependent)

**Simultaneous Threats** – over 100

**Software Compatibility** – Windows / Mac / Linux

## Specifications

**Input Voltage** – 9-36V

**Power Consumption** – 8W

**Power Connection** – Two pin sealed connector included

**Connectivity** – via LAN in existing IT infrastructure

**Temperature Range** – 0°C to 70°C (32°F to 158°F) extended temperature range available upon request

**Humidity Range** – 0 to 95% non-condensing

**Enclosure** – Cast aluminum, weatherproof, black

**Size** – 8.750 x 5.750 x 2.170" (222.25 x 146.05 x 55.12 mm)

**Antenna** – Omnidirectional 2.4/5 GHz, GPS included (other configurations available upon request)

**Antenna Connection** – 2x SMA-RP jack for 2.4/5 GHz, 1x SMA jack for GPS

**Range** – 500m terrain dependent (1640 ft)

*Omnidirectional Antenna with Available Roof Mount*
